

**GILLAM TO LECTURE ON DENTINE HYPERSENSITIVITY  
AT 2017 DENTISTRY SHOW SPONSORED  
BY BIOMIN TECHNOLOGIES LIMITED**

Dr David Gillam, Clinical Senior Lecturer in Periodontology at the Dental Institute, Queen Mary University of London will present a one hour lecture on the diagnosis, treatment and management of dentine hypersensitivity at The Dentistry Show.

The lecture will take place in The Perio lounge at 13:30 on Saturday 13<sup>th</sup> May.

In addition, Dr Gillam will be giving shorter reviews about managing dentine sensitivity on the Trycare stand E40 at 9.30 and again at 11.00 on Saturday 13 May. In his main lecture Dr Gillam, a specialist in periodontology and recognised expert on dentine hypersensitivity, will highlight recent guidelines regarding the management of dentine hypersensitivity.

"I will explain the importance of working towards a joint management strategy involving both the dental professional and patient to understand the potential impact dentine hypersensitivity has on a patient's day to day activities," explained Dr Gillam. "The steps to be taken to make changes in the patient's behavior will also be covered."

BioMin Technologies, which is sponsoring the lecture, launched its toothpaste ingredient which puts back the lost minerals from tooth enamel and helps prevent decay and treats sensitivity while you sleep in London 12 months ago.

Toothpastes with the BioMin™ ingredient are now selling in the UK and across a number of other countries and licensing agreements are being negotiated and are currently in place in India, China, the US and Australia. The company is also seeing interest from dental professionals, dental manufacturers and dental distributors from around the world.

BioMin Technologies Limited, chief executive Richard Whatley said, "This is a very exciting time for us as the technology behind BioMin™ can also be incorporated in other professionally applied dental products such as cleaning and polishing pastes, varnishes and remineralising filling materials. With so many opportunities still open for BioMin™, I look forward to discussing these with visitors to the Trycare stand E40 at The Dentistry Show."

## **Notes**

Dr David Gillam

Dr Gillam is currently Senior Clinical Lecturer in Periodontology at the Bart's and the London Medical and Dental School QMUL in London (2009-). His main interests are in the area of the Management of Dentine Hypersensitivity and collaborates with Professor Robert Hill in the development of innovative oral care products, for example, novel bioactive glasses, hydroxyapatite toothpastes and mouthwashes for the treatment of various dental conditions.
