

Case Study

**Beverley Watson,
Registered Dental
Hygienist, Dubai**

Ahead of a dental procedure, I needed to give a patient's teeth a very thorough clean. She had severe recession and sensitivity, and was extremely nervous.

My guided biofilm therapy (GBT) protocol is very gentle and technologically advanced, using Airflow, which is normally tolerated by even the most sensitive patients. This patient could not even bear that.

I had not used BioMin® F toothpaste before, but I had a sample to hand so I decided to try it. I used the slow handpiece to gently polish with BioMin F all around the exposed surfaces, and flossed in between the teeth with it. The effect was amazing and immediate. I was able to carry out a full and thorough GBT procedure – and the patient did not experience any sensitivity at all. She was smiling as she left the chair.

I followed up with her the next day and she experienced no pain or sensitivity and said her teeth had never felt so thoroughly cleaned. I sent her a link to buy the Biomin tooth paste for home care which she ordered immediately.

I use BioMin F regularly now for patients with recession, before and after whitening procedures, and recommend they buy it for use at home.

I'm a believer now too, and I like the fact it is low in fluoride. I and my family all use it.
