

Case Study

Gitana Rederiene, dental hygienist at the University Hospital Dental Clinic, Vilnius, President of the Lithuanian Dental Hygienists' Association and owner, Oralmeda.

A teenager had undergone orthodontic treatment for two years, but she had very poor daily oral hygiene habits and it was hard to motivate her.

Her parents and I were very much afraid she would have developed a lot of cavities during her orthodontic treatment.

I prescribed her BioMin® F toothpaste for daily use during her orthodontic treatment, we had regular visits every three months and after the braces were removed no cavities developed. I now regularly prescribe and recommend BioMin® for patients undergoing orthodontic treatment.
